

HOW CITY INNOVATE HELPS GOVERNMENT AGENCIES SOLVE THEIR MOST URGENT CHALLENGES

When the **California Middle-Mile Broadband Initiative** was tasked to manage a gigantic influx of new federal funding (over \$3 billion), they needed a way to distribute the funds fast, and there was no existing system in place. City Innovate provided a platform that ensured compliance, was easy to use, and enabled the organization to quickly implement a cloud-based solution in support of a robust program delivering broadband internet access to unserved areas of the state.

The 10,000 employee-strong **California Employment Development Department** faced the challenge of modernizing their aging technology infrastructure to provide life-changing services to residents. City Innovate partnered with the department to break down their complex problems into manageable projects, build RFIs in record-time, and ensure that the modernized system will improve overall quality, reduce the potential for fraud, and provide superior cost and value to the people of the State of California.

After two existing organizations joined forces to manage \$24 million in funding for affordable housing, **MTC-ABAG** sought ways to improve operations, create standardized tracking systems, and increase their ability to glean information from documents. City Innovate leveraged Document Process Automation™ to reimagine the organization’s grants management process for instant, accurate analysis of the status of every dollar in the system throughout the entire grant lifecycle.

CalRecycle responds to the devastating effects of wildfires and the agency is committed to innovation and continuous improvement to deliver disaster recovery faster. Their work involves actively recruiting new vendors, while evaluating existing vendors on a rolling basis. City Innovate partnered to iterate on their pre-qualified vendor pool and adapt their existing processes to the cloud for greater usability and efficiency. Now, once the agency is “mission tasked” to respond to a fire, they’re able to choose a vendor and award a Request for Bid in three days or less.
